Measuring Project Success

Workshop Description

The Challenge
Project Success is everyone's business. The Sponsor who requests the project, the project manager who directs it and the customers who will receive the benefit all want the project to be successful. But what is success? Does everyone define it in the same way? Who is responsible for defining project success? If the definition of project success is not clear, how do we evaluate the project?

The Solution
This workshop examines some age-old questions in project management and comes up with some surprising answers. Failure to deal with questions like this at the start of a project can create difficult questions at the project's end. Join us in an in-depth look at this fascinating subject and take away insights on how to define and measure success in your own projects.

Who should attend

The workshop will benefit anyone with project responsibility: Project Managers, Managers of Project Mangers, Functional Managers and Executives with project responsibility, Project Management Office staff and anyone who has project lead responsibility.

Learning Objectives – Understand the following:

- Project Success and the means to measure it should be defined early in the project.
- Many perspectives on project success should be considered.
- Stakeholders ultimately decide whether a project was successful.
- Meeting stakeholder expectations is key to a successful project.
- Project success should be defined in terms of project objectives. Project objectives and business objectives should be clearly distinguished.
- The Project Manager is responsible for meeting project objectives, and therefore is accountable for project success.
- The Business Sponsor is responsible for meeting business objectives, and therefore is accountable for the business value the project is intended to produce.

Workshop Information

- **Duration**: ½ day
- **Typical class size**: 6 to 40 attendees
